

EnPI V3.0 Tool Installation Instructions

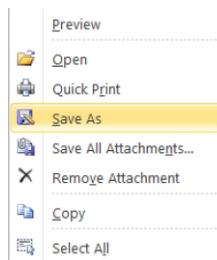

Beta Version

Installation Instructions

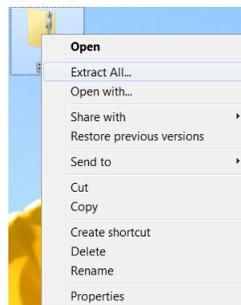

The latest version of the EnPI Tool has been developed as an Excel Add-In and needs to be installed to run. Once installed, an “EnPI” tab will appear at the top of any Excel workbook. The installation method for users with Microsoft Excel 2007 varies slightly from the method for users with Microsoft Excel 2010. The tool has been tested on 32-bit and 64-bit systems. Please find the steps for installing the tool below.

If installing on a system with office 2007

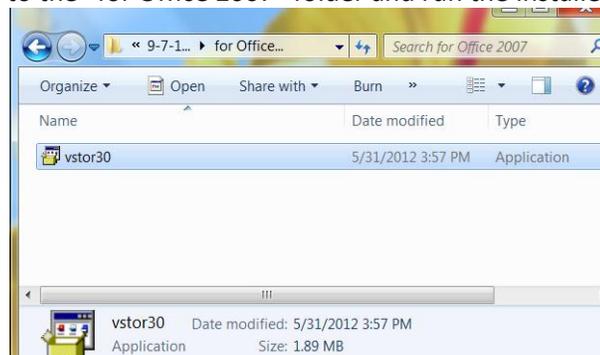

1. Save the file to your computer.

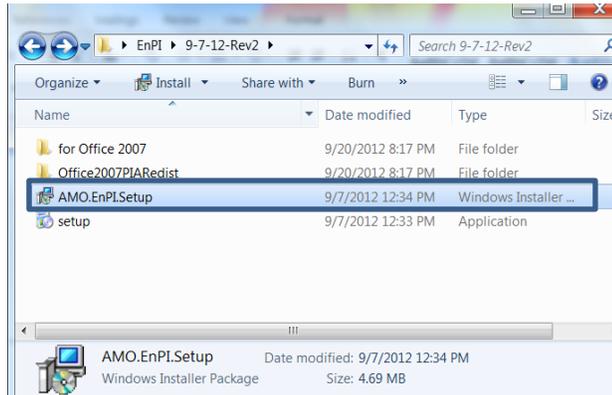

2. Unzip the folder by right clicking on the folder with your mouse and selecting “Extract All” or “Extract To”.

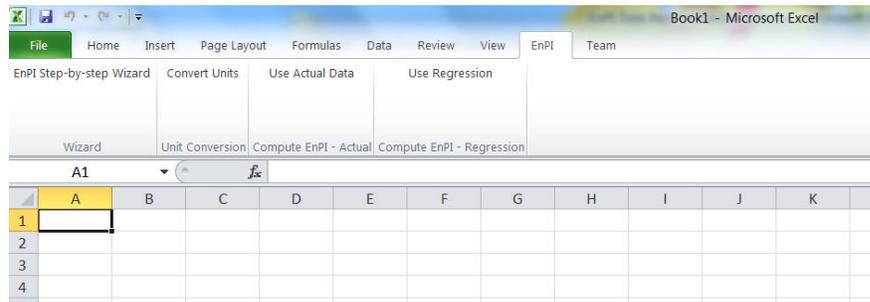

3. In the folder, navigate to the “for Office 2007” folder and run the installer “vstor30.exe”.

4. If that installer completes without error, go back to the main folder and run “setup.exe” and follow on screen instructions.

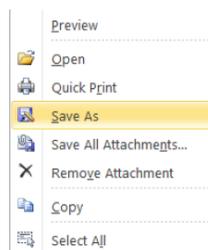

5. If the installer completes without error, the installation should be complete and you can now open excel. The add-in will appear as a tab at the top of your Excel file. Click on “EnPI Wizard” or “Use Regression” to begin.

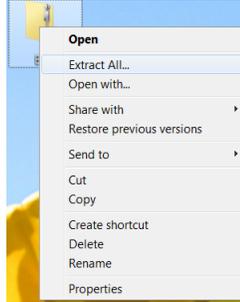

If installing from system with office 2010

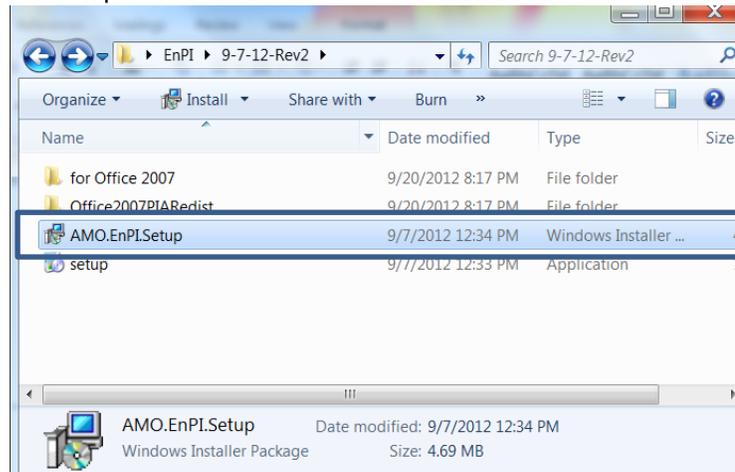

1. Save the file to your computer.

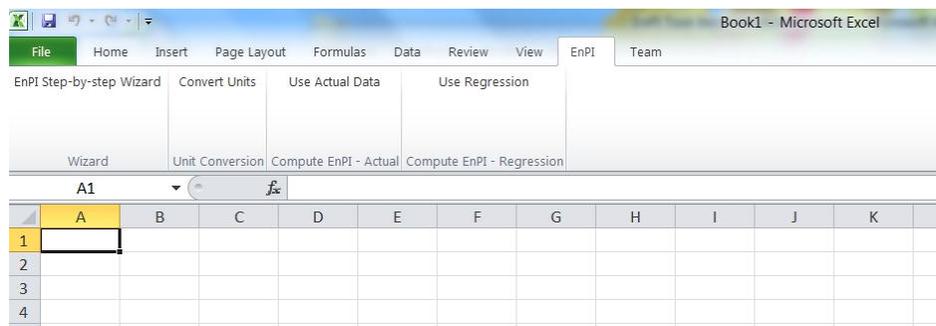

2. Unzip the folder by right clicking on the folder with your mouse and selecting “Extract All” or “Extract To”.

3. In the folder, select “setup.exe” and follow on screen instructions

4. If the installer completes without error, the installation should be complete and you can now open excel. The add-in will appear as a tab at the top of your Excel file. Click on “Use Regression” or “EnPI Wizard” to begin.

Please Note: When opening excel for the first time after installing you may be prompted that the software is from an unknown publish, simply select continue.

If you have difficulty installing the program, please contact Ben VanDenBerg at Ben.VanDenBerg@PPC.com or 703-748-7049.
